EXPERIENCE

Zeta Global · Software Engineer

New York, NY · Oct 2024 – Present

- Migrated the **entire backend** off a legacy monolith into Django REST Framework on **Postgres**, with **one other engineer in six months**, and rebuilt the front end in React/TypeScript. **30,000+ active newsletters serving billions of ad impressions a week**.
- Cut **Ad Slot Details**, a page ad ops and clients use daily, from **120 API calls to 1** and load time from **60s to 2s**.
- Built the platform's **first automated tests** as a research project: an **agentic Playwright framework** (planner, generator, self-healer) that writes and repairs its own specs, still running after the platform merged into the monorepo.
- Owned **Sponsorships** from data model to UI. Chose a many-to-many schema, multiple line items and newsletters per sponsorship, **because one-to-one is not a feature you add later, it is a migration of live data**; built the UI with a designer and defended it with product and ops. Live on **hundreds of millions of impressions a week**, including **The Washington Post**.
- Led multiple projects directing other engineers, writing the **design docs and proofs-of-concept** they were built from. **Other teams build features on the models and settings I own**.
- Carry the **on-call rotation every week and a half**: roll back bad releases, scale worker capacity under load, and debug failures across **11 sync pipelines** and the XML generation feeding **S3**.
- Mentor juniors on backend architecture and ad serving across a **7-person team**; **onboarded a senior hire** onto the systems I own.

LiveIntent · Software Engineer

New York, NY · Feb 2023 – Oct 2024

- Owned **Creative Mapping v2** end to end: MySQL schema, REST API, and Angular UI controlling which creatives serve on which ad slots in the XML pipeline.
- Fixed a critical performance regression in the ad slot search endpoint; closed **138 bugs** overall, 8 critical.
- Worked directly with **Criteo's** engineers on XML specification changes that ad serving depended on, coordinating the rollout across both companies.
- Ran **13 publisher migrations** with ACID-safe scripts, moving inventory, campaigns and permissions between accounts, including **BuzzFeed** and **Dotdash Meredith**.
- Built Third Party Demand controls for RTB native and hybrid ad slots, plus the self-service flow letting publishers enable Native ads themselves, **replacing a manual eng script**.

LiveIntent · Associate Software Engineer

New York, NY · Feb 2022 – Feb 2023

- Built the **Google Ad Manager integration for Native Ad Slots** from scratch: endpoints, geo-targeting, and Native support in the XML pipeline.

PROJECTS

Five production apps on Cloudflare Workers, Durable Objects, and D1, each with CI and automated tests. (aidenjang.com · github.com/aiden-jang)

- bloomnote**. Write a note, an LLM designs a garden from it via forced function calling, streamed over SSE.
- wherever**. Group restaurant picking by swipe vote; one Durable Object per session, Google Places.
- owewell**. Live bill splitting with real-time sync; money handled as integer cents.
- accounts**. Shared OAuth sign-in the other four apps authenticate through.
- iguess**. Real-time draw-and-guess against an AI; one Durable Object per room over WebSockets.
- everythingisfine**. Live planet globe reconciling two earthquake feeds that disagree: USGS polling, EMSC WebSocket.
- Open source · iodine**. TypeScript IDE; made file paths in the AI assistant's output clickable, opening the file at that line.

SKILLS

Languages Python, TypeScript, JavaScript, PHP, SQL

Backend Django, Django REST Framework, FastAPI, Laravel, Node.js

Frontend React, Angular, Next.js

Data & Infra PostgreSQL, MySQL, Redis, Docker, Kubernetes, AWS (EC2, S3, RDS), Cloudflare Workers / Durable Objects / D1, Datadog

AI Claude API, LLM function calling, agentic test generation

Testing & CI Playwright, Jest, Jenkins

EDUCATION

App Academy · Computer Software Engineering

Jun 2021 – Oct 2021

Rutgers University – New Brunswick · B.S. Computer Engineering, Cum Laude

May 2020
