EXPERIENCE

Zeta Global · Software Engineer

New York, NY · Oct 2024 – Present

- Migrated the **entire backend** off a legacy monolith into Django REST Framework **with one other engineer in six months**, writing the models, schema migrations, serializers, endpoints, and rules, and rebuilt the front end in React/TypeScript. **30,000+ active newsletters**.
- Cut **Ad Slot Details**, a page ad ops and clients use daily, from **120 API calls to 1** and load time from **60s to 2s**.
- Built an **agentic Playwright framework** (planner, generator, self-healer), the platform's first automated end-to-end coverage.
- Owned **Sponsorships v1.0** from data model to UI, designing the schema for multiple line items and newsletters per sponsorship plus creative scheduling, and defended it with product and ops. Now live in production, including with **The Washington Post**.
- Led multiple projects directing other engineers, writing the **design docs and proofs-of-concept** they were built from. **Other teams build features on the models and settings I own**.
- Carry the **on-call rotation every week and a half**: roll back bad releases, scale worker capacity under load, and debug failures across **11 sync pipelines** and XML generation that stop ads serving.
- Mentor junior engineers on backend architecture and ad serving across a **7-person team**.

LiveIntent · Software Engineer

New York, NY · Feb 2023 – Oct 2024

- Owned **Creative Mapping v2** end to end: MySQL schema, REST API, and Angular UI controlling which creatives serve on which ad slots in the XML pipeline.
- Tracked down and fixed a critical performance regression in the ad slot search endpoint. Closed **138 bugs** overall, 8 of them critical, including SSP XML creative duplication and an RTB settings regression.
- Worked directly with **Criteo's** engineers on XML specification changes that ad serving depended on, coordinating the rollout across both companies.
- Ran **13 publisher migrations** with ACID-safe scripts, moving inventory, campaigns and user permissions between accounts, including **BuzzFeed** and **Dotdash Meredith**.
- Built Third Party Demand controls for RTB native and hybrid ad slots, plus the self-service flow letting publishers enable Native ads themselves, **replacing a manual eng script**.
- **Interviewed candidates** for engineering roles on the team.

LiveIntent · Associate Software Engineer

New York, NY · Feb 2022 – Feb 2023

- Led **LiveTag 3.0** UI work in Angular: ad slot create/edit forms, RTB settings, exchange demand toggles, and floor pricing.
- Built the **Google Ad Manager integration for Native Ad Slots** from scratch: create and update endpoints, Country/Region and Metro/DMA geo-targeting, and Native support in the XML generation pipeline.

PROJECTS

Five production apps sharing one sign-in service, built and deployed on Cloudflare Workers, Durable Objects, and D1, each with CI and automated tests. (aidenjang.com · github.com/aiden-jang)

- **bloomnote**. Write a note, an LLM designs a garden from it via forced function calling, streamed over SSE.
- **wherever**. Group restaurant picking by swipe vote; one Durable Object per session, Google Places.
- **owewell**. Live bill splitting with real-time sync; money handled as integer cents.
- **accounts**. Shared OAuth sign-in the other four apps authenticate through.
- **iguess**. Real-time draw-and-guess against an AI; one Durable Object per room over WebSockets.

SKILLS

Languages Python, TypeScript, JavaScript, PHP, SQL

Backend Django, Django REST Framework, FastAPI, Laravel, Node.js

Frontend React, Angular, Next.js

Data & Infra PostgreSQL, MySQL, Redis, Docker, Kubernetes, AWS (EC2, S3, RDS), Cloudflare Workers / Durable Objects / D1, Datadog

AI Claude API, LLM function calling, agentic test generation

Testing & CI Playwright, Jest, Jenkins

EDUCATION

App Academy · Computer Software Engineering

Jun 2021 – Oct 2021

Rutgers University – New Brunswick · B.S. Computer Engineering, Cum Laude

May 2020
