EXPERIENCE

Zeta Global · Software Engineer

New York, NY · Oct 2024 – Present

- Migrated the platform off a legacy monolith onto a Django REST API **with one other engineer**, and rebuilt the front end in React/TypeScript. The platform serves **2,500+ publisher newsletters** and reaches **240M+ readers**.
- Cut the Line Item Details page from **120 API calls down to 1**, on a tool internal ops and sales use every day.
- Built an **agentic Playwright framework** (planner, generator, self-healer) that gave the platform its first automated end-to-end coverage.
- Owned **Sponsorships v1.0** from data model to UI. Designed the schema to support multiple line items and multiple newsletters per sponsorship, plus creative scheduling, and defended those choices with product and ops.
- Shipped **Audience Extension** and **Blackout Periods** from scratch, adding campaign scheduling and bulk DMA and zip-code geo-targeting.
- Carry the **on-call rotation** for the platform, responding to production incidents across ad serving and campaign delivery.
- Mentor junior engineers on backend architecture and ad serving across a **7-person team**, and run weekly knowledge-sharing sessions.

LiveIntent · Software Engineer

New York, NY · Feb 2023 – Oct 2024

- Owned **Creative Mapping v2** end to end: MySQL schema, REST API, and Angular UI controlling which creatives serve on which ad slots in the XML pipeline.
- Tracked down and fixed a critical performance regression in the ad slot search endpoint. Closed **138 bugs** overall, 8 of them critical, including SSP XML creative duplication and an RTB settings regression.
- Built Third Party Demand controls for RTB native and hybrid ad slots, and ran **5+ publisher data migrations** covering inventory, campaigns, and user data.
- Built the bulk operations status page in Angular so ops teams could watch batch jobs run in real time.

LiveIntent · Associate Software Engineer

New York, NY · Feb 2022 – Feb 2023

- Led **LiveTag 3.0** UI work in Angular: ad slot create and edit forms, RTB settings, exchange demand toggles, floor pricing, and self-service publisher onboarding.
- Built the **Google Ad Manager integration for Native Ad Slots** from scratch: create and update endpoints, Country/Region and Metro/DMA geo-targeting, and Native support in the XML generation pipeline.
- Added creative targeting to the XMLGEN pipeline and built the bulk operations backend, including background jobs and cancellation.

PROJECTS

Five production apps sharing one sign-in service, built and deployed on Cloudflare Workers, Durable Objects, and D1, each with CI and automated tests. (aidenjang.com · github.com/aiden-jang)

- **bloomnote**. Write a note and an LLM designs a garden from it using forced function calling, streamed to the recipient over SSE.
- **wherever**. Group restaurant picking by swipe vote, majority settles it. One Durable Object per session, backed by Google Places.
- **owewell**. Live bill splitting with real-time sync across everyone at the table, money handled as integer cents.
- **accounts**. Shared OAuth sign-in service that the other four apps authenticate through.
- **iguess**. Real-time multiplayer draw-and-guess against an AI. One Durable Object per room over WebSockets, with pluggable game modes on a shared engine.

SKILLS

Languages	Python, TypeScript, JavaScript, PHP, SQL
Backend	Django, Django REST Framework, FastAPI, Laravel, Node.js
Frontend	React, Angular, Next.js
Data & Infra	PostgreSQL, MySQL, Redis, Docker, Kubernetes, AWS, Cloudflare Workers / Durable Objects / D1
AI	Claude API, LLM function calling, agentic test generation
Testing	Playwright, Jest

EDUCATION

App Academy · Computer Software Engineering

Jun 2021 – Oct 2021

Rutgers University – New Brunswick · B.S. Computer Engineering, Cum Laude

May 2020
